hi@dereknutile.com

Summary

I have been actively developing web based applications and properties for over 10 years. My experience in the IT industry started over 20 years ago and has touched most aspects of technology. I have a strong work ethic and deep skill set.

Samples

Much of my work is stored on Github and Bitbucket in private repositories. I can produce code samples on request or when we meet. Please review some of the sites I've crafted:

Code Repositories
https://github.com/dereknutile, https://bitbucket.org/dereknutile

Recent Client Websites
http://mastercraft.com/, https://backstage.converse.com, http://oetc.org, http://store.oetc.org, http://events.oetc.org, http://integrated.oetc.org, http://teach.oetc.org, http://vote.oetc.org, http://techhead.org

Personal Websites
http://dereknutile.com, http://deriolabs.com/, http://pixelnewt.com

Expertise

Back End Developing
PHP, Composer, Python, Django, Ruby, Rails, scripting (Powershell, cscript, vbs, batch, bash, etc.), SVN/GIT/HG, CakePHP, CodeIgniter, Laravel, Zend Framework, Magento, Wordpress, Drupal, .NET, VB, C, Perl

Front End Developing
AngularJS, Bower, GruntJS, NodeJS, EmberJS, MeteorJS, CSS/LESS/SASS/SCSS, XML/JSON, Javascript/ECMAScript, jQuery, markdown, mustache templating, .NET, VB, C, Perl

Databases & Cloud
Amazon AWS, Rackspace, DigitalOcean, Heroku, Active Directory, LDAP, SAML/PingFederate, Microsoft Exchange, Postfix/SMTP, Citrix, VMWare, Apache, Nginx, IIS, Borderware, Smoothwall, Microsoft SQL & SSIS, MySQL, Postgres, MongoDB, Redis

Experience

Entrepreneur/Freelancer, PixelNewt
Portland, Oregon — July 2014 - Current

After loyally serving other companies, I decided to take my many years of experience in planning, scoping, leading, and developing applications to the next stage. I've setup a small company and several web properties to promote my skills in a freelance environment.

Lead Developer, TheGood
Portland, Oregon — November 2013 - July 2014

Working with an agency that produces web properties for medium and large Active Lifestyle clients, was a great experience. During my tenure, I affected change in the processes of planning, scoping, and developing secure web applications.

A few of my most notable acheivements were the development of the Converse internal marketing portal https://backstage.converse.com/ built with Python and the Django framework, hosted on Amazon AWS. The portal is actually three applications merged together: an asset management piece, a knowledge share, and an extranet for partners.

Additionally, I delivered several modules and add-ons to the existing http://www.mastercraft.com/ website like ExactTarget integration, an event calendar, and internationalization of the entire website.

IT Director, OETC
Sherwood, Oregon — October 2007 - November 2013

Hired as a web developer, I was promoted to IT Director in 2010. OETC is a small organization so my duties included most aspects of IT. About 75% of my time was spent developing, the remaining time was spent on networking and administrative tasks.

Accomplishments
- Built our main eCommerce application store.oetc.org which handles $25 million in annual sales and is fully PCI compliant
- Engineered a systemized bridge between our Microsoft Dynamics accounting system and several of our commerce sites
- Coupled our eCommerce sites with Cnet datasource
- Virtualized all servers into Rackspace and Amazon AWS
- Created and maintained several sites using Python, Perl, Python, PHP, Ruby on Rails, as well as Wordpress, Drupal and Magento

Network Administrator/Developer, Stoel Rives LLP
Portland, Oregon — August 1998 - October 2007

I started my career with Stoel Rives, the largest law firm in the Pacific Northwest, as an IT support specialist. It wasn't long before my responsibilities expanded to cover peer support, networking, and developing.

My support duties covered helping end users with any and all technical issues, as well as assisting and teaming with peers. As a certified Microsoft MCSE, I administered Microsoft SQL, Exchange, Borderware firewall, and Blackberry BES servers.

To support users and servers, I found myself writing a lot of programs and scripts to automate tasks. The largest of these programming projects was a web based help desk support system that handled over 30,000 tickets annually.

Store Technologist, Safeway Inc.
Clackamas, Oregon — 1992 - 1998

My career at Safeway Tech involved hardware and software support for 100 stores through Oregon. I would maintain systems and be the first contact if a store had technical problems.
